

I am an advanced class in favor of RM-10352.

My own reason for supporting this is I left 160 meters early in August 1972 because of intentional interference to CW from SSB/AM operation. At that time interference was a problem on 160 meters. From comments I see it still is a problem.

I do not work as much CW as some people but I still enjoy CW and do not like interference. A CW segment is long overdue and has been needed for many years. Please make 160 meters like all the other amateur bands.
